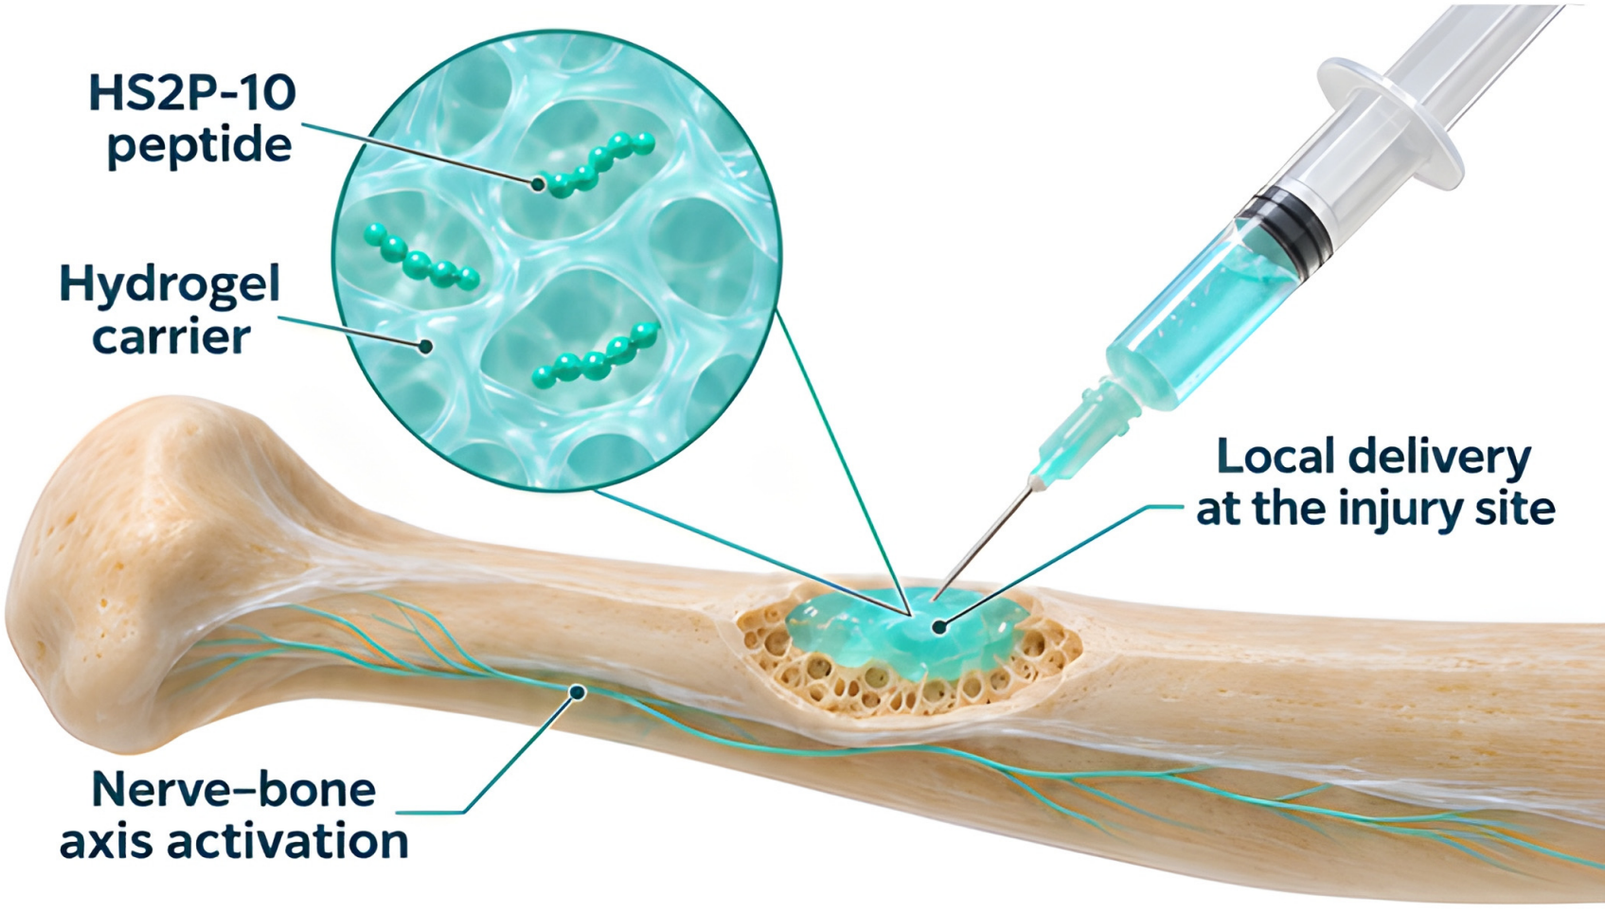
# HS2P-10 Injectable Hydrogel

## A new approach to local bone repair



## HS2P-10 peptide-containing injectable hydrogel promotes bone mineralisation (the brick) and type I collagen expression (the mesh) to facilitate bone repair

HS2P-10 neuro-osteogenic peptide derived from Chinese yam

Clinical development in progress

# Let's advance bone repair together

We welcome partnerships across the development and commercialisation of HS2P-10 injectable hydrogel.

- **Orthopaedic devices and biomaterials**
- **Manufacturing and GMP scale-up**
- **Preclinical and clinical research**
- **Regulatory development**
- **Licensing and distribution**
